Solid State Relays

Potter & Brumfield Models SSR are SPST "Hockey Puck" style solid state relays for general power switching applications. These feature a dual, back to back SCR, Zero-Cross switching output for most inductive and high inrush loads. Parts ending in "R" are random turn-on outputs for phase control applications. SSRD (Dual) and SSRQ (Quad) are multiple output relays where each output is controlled separately. SSRT are SPST "Hockey Puck" style relays with snubberless Triac Outputs for inductive switching and high inrush applications. Enhanced noise immunity (designed to meet level 3 requirements of European EMC Directive). Includes LED indicator and floating terminal design.

Safety Relays

Safety-implemented circuits must be control reliable as mandated in the U.S. and European safety standards. Safety relays have the function to positively isolate safety circuits of emergency shut-off, machine control, elevator and escalator controls, light barrier control, furnaces, medical apparatus or any application requiring redundant shutoff safety requirements. These relays are designed with force guided contacts where in the event of a fault (1 contact welds closed), the second contact must carry out the switch off condition.

CLARE
An IXYS Company

Solid State Relays and Switches OptoMos® Solid State Relays

As a leading supplier of Solid State Relays (SSRs) to the communications industry, Clare has pioneered the application of SSR solutions that both replace electromechanical devices and enhance performance in wireline interface applications. Clare's products enable communications by providing the critical interface between high voltage electrical signals and the low voltage electronics that process those signals. LITELINK® III single-chip silicon phone line interfaces (DAA) use optical technology to include the required isolation barrier in the package, eliminating high cost capacitors or transformers. This solution saves cost relative to competitive solutions through reduced passive component count and less board space. LITELINK III supports differential and single-end receive and transmit ports providing an easy interface to popular modem IC's codecs and voice SLAC devices. **Features:** • Voice and data applications • Modem DAA for speeds up to V.92 • Caller-ID reception • 3.3 or 5V power supply **Applications:** • Computer telephony • Satellite set-top box • V.92 modems • Fax machines • Voice mail systems • Automated banking • Security systems

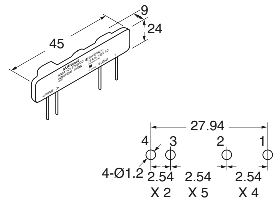
SIP Conformal Coated Solid State Relays



Dim. in mm

AQ2 SIP SSRs are designed as suitable drivers for AC motors, solenoids, valves, etc. These offer excellent noise resistance with an integrated snubber circuit and ultra thin body (only 9mm) for maintenance-free, long life switching. Zero-Cross is a low noise switching output whereas Phase Controlled are ideal for phase controlled applications such as motor speed control and light dimming.

Compare the Technological Advantages of Omron's G3VM MOS FET Relays

Current Technology	vs.	The Advantages of Omron's MOS FET Relays
Reed Relays		**G3VM Series offers:** • Longer life • Lower pick-up power • Smaller size/less board space • Faster switching speed • Greater resistance to shock/vibration • Higher isolation voltages
Photocouplers		**G3VM Series offers:** • Linear ON-resistance • High isolation voltage and increased sensitivity • The ability to switch AC and DC loads • Voltage control up to 600V
Electromechanical Relays		**G3VM Series offers:** • Longer life • Lower pick-up power • Lower profile and smaller footprint • High-speed operation • Greater resistance to shock and vibration • Higher isolation voltages

Current Technology	vs.	The Advantages of Omron's MOS FET Relays
Solid State Relays with Thyristor Output		**G3VM Series offers:** • Linear ON-resistance • The ability to switch AC and DC loads • The ability to control high frequency loads • No signal distortion
Solid State Relays with BJT Output		**G3VM Series offers:** • Lower ON-state offset voltages • Minimal leakage current • Better voltage control • No signal distortion
Solid State Relays with Triac Output		**G3VM Series offers:** • Minimal leakage current • Increased protection, eliminating the need for a snubber circuit • No signal distortion

Advantages of MOS FET Technology and Construction

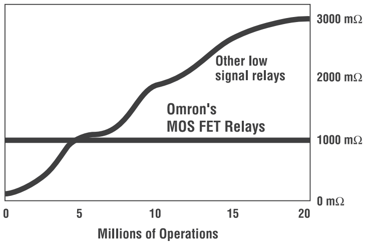
60% smaller than reed relays and still outperforms the competition.

The G3VM delivers design flexibility without sacrificing accuracy or performance. It's now possible for designers to give their products more functionality and reduce overall machine size.

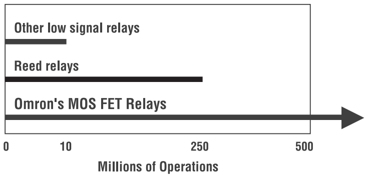
100,000 hours and still going

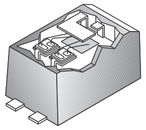
An independent firm ran tests on the only part of the G3VM that might possibly waver in performance - the LED chip. They simulated operation for a total of 100,000 hours (equivalent to more than 11 years!) and the G3VM was still operating successfully.

Contact Resistance



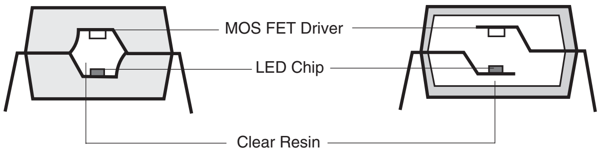
Mechanical Life





For Greatest Accuracy — it has to be White Resin

Omron's White Mold Resin **Competitor's Black Mold Resin**



For maximum performance and accuracy, the G3VM is cast in white resin, which reflects more light from the LED chip to the MOS FET driver than black resin, which absorbs light. White resin also helps the relay dissipate heat more effectively. This means relays can be placed closer together on circuit boards with no worry of overheating, and no loss of accuracy or function.

OMRON Solid State Relays

Omron's G3VM relays are PCB and SMT solid state switches that are capable of controlling voltages up to 600V. Extremely low input currents, low ON-State Resistance and small packages make these relays ideal for microprocessor and logic switching. Current limiting input resistor required for operation. Packages include 4, 6 and 8 pin Dip, SMT, or SOP packages or use the extremely small 4-SSOP package for extremely small board space requirements. Relays will switch both AC or DC voltages. G3M and G3MB relays are larger current relays but offered in a SIP package to reduce board space. Perfect for controlling pumps, alarms, solenoids and other inductive/capacitive loads. Use zero-cross for general power switching or highly inductive loads or use Phase Controlled for output control of motor speed controls or light dimming. The G3R relays are drop-in replacements to the popular G2R Electromechanical relays. Perfect for compact Din-Rail mounting and applications requiring the long life of solid state relays. G3TC series are replacement to standard I/O modules. Replaces Opto22, Gordos and many other I/O modules. Perfect for multiple output controls.

crydom™ Solid State Relays

Fig. 1

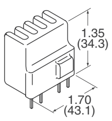
PF Series

PowerFin™ series delivers the highest ratings of any single in-line package (SIP). The integral heat sink design can operate at 25 amps in forced air, or 10 amps with natural convection. R suffix versions are phase controlled output.



ASPF Series

ASPF SSR incorporates the PowerFin™ design with an integral heat sink on the compact Mini-SIP package. Rated at 3.0 AMPS up to 45°C, this SPST-NO AC output SSR is for applications where precise electrical power control is essential. Zero voltage or random switching (R suffix) versions are offered.

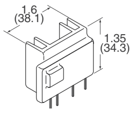


Fig. 2

Crydom's LS family of SPST-NO relays achieves the highest power switching capability in a PC-mounted air-cooled package. Output consists of an SCR AC switch and is available in zero-cross and random turn-on (suffix R).

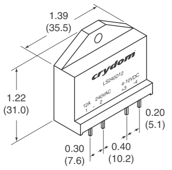

Fig. 3

Relays combine small size and high ratings in a package designed for easy heat sink or panel mounting. Standard .187 push-on terminals assure quick connection and are arranged to provide maximum isolation between signal and power circuits. Model S228C is a snubberless design for applications that require low off-state leakage.

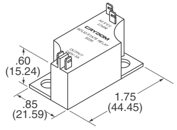

Fig. 4

Series CMD

CMD series uses standard box terminals for reliable long term connections and finger safe screws eliminates the need for a separate protective cover. A visual LED indicator allows circuit status on the relay. CMD series works with existing Crydom SSR heat sinks.

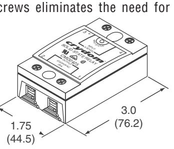

Fig. 5

Series PCV Analog Power Controller

The Series PCV Analog Input Power Controllers are 0-100% variable power controllers for 120 or 240VAC loads which vary with an analog input of 2 to 10VDC. The input and output are proportional by integrating a complete phase fired logic system and a solid state relay in the same package. Applications include heaters and lighting, motors and feeders, etc.

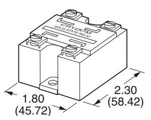

Fig. 6

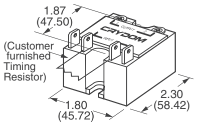
Series DSD, DLD Time Delay Relay

These Delay-On time delay relays offer customers to externally adjust their delay time by selecting the value of the external customer supplied resistor. DSD are short time delays and DLD are longer time delay durations. Timing resistors should be 1/4 watt or higher.



Typical Turn-On Delay For Various Timing Resistances

Resistor	Time (DSD)	Time (DLD)
0 (Short)	0.10 sec.	1.6 sec.
10KΩ	0.19 sec.	3.1 sec.
100KΩ	0.94 sec.	15 sec.
470KΩ	4.0 sec.	64 sec.
1.0MΩ	8.3 sec.	133 sec.

Fig. 7

The MCST series of controls is designed to provide adjustable surge reducing soft-start and soft-stop control for any load which would benefit from a gradual application/shut down and provide Crydom SSR switching within one package. Adjustable ramp times.

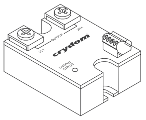


Fig. 8

Models SST120 and SST240 auxiliary function modules gradually apply power to the load when energized by the control voltage. Part sold complete with soft-start module and relay.

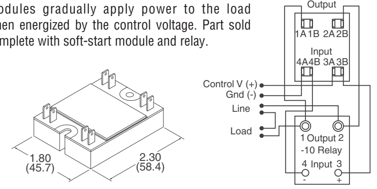

Fig. 9

RPC series proportional controllers provide a cost effective method of controlling power in many different applications such as heaters, universal motors or incandescent lamps. A customer provided potentiometer is all that is required for control.

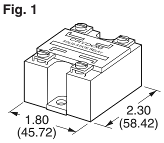
Fig. 1



Series 1, HD, HA: • These SPST-NO relays deliver proven reliability in the most demanding applications. Output consists of an SCR AC switch, available in either zero voltage turn-on or random turn-on, phase controlled models. (-10 versions are phase controlled. Crydom part numbers ending in "B" are normally closed versions.)

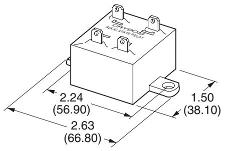
Series T: • Industry Standard Package • Snubbers are included for high DV/DT applications and inductive loads, together with zero-voltage switching to reduce inrush currents and electrical noise.

Series H12: • High voltage relays use IC driven circuits for switching loads up to 660 VAC with 1200 Volts blocking standard.

Series 1-DC: • Low On-State Resistance • Paralleling Capability for Higher Currents • DC output relays feature MOSFET technology for low on-state resistance, assuring easy paralleling and switching capabilities to 40 amps at 100 VDC.

Series CS: • Low Leakage • SCR AC switch output models feature low off-state leakage (snubberless), zero-voltage switching and have a broadened operating range at both 120V/240VAC line voltages.

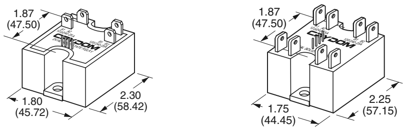
Fig. 2



Series EZ: • Low Leakage • Quick Connect Terminals • Offers a low profile package with the convenience of quick connect terminals • 4000 Vrms opto-isolation and low off-state leakage are standard.

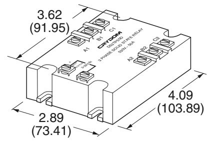
Fig. 3

Dual Relay **Quad Relay**



Two (Dual) or four (Quad) totally independent AC output relays come in a single standard panel-mount package. Utilizing an AC switch output with internal snubber, relays provide greater protection against false triggering. (-10 versions are phase controlled)

Fig. 4



• SCR Output • AC or DC Control • LED Status Indicator Three-phase solid state relays switch up to 530 Vrms directly to loads such as motors, transformers, heating elements, etc. Models are available with either AC or DC input (coil). For heatsink use part number CC1114-ND.

Series IAC, IDC, OAC, ODC

• Opto-Isolated • Solid state I/O switching modules deliver an electrically clean, photo-isolated, noise free "output" interface from logic level control systems to external loads such as motors, valves, solenoids, etc. DMP versions are epoxy conformal coated for fast heat transfer.

Series 6

Series 6 buffered output modules contain additional internal amplification to reduce drive requirements to a level suitable for the Mos devices used in many microprocessor systems. Models are available with either inverting or no-inverting inputs, for 5 and 15 volt logic.

Crydom's G2 series of SSR's feature extremely low RDSon, low leakage and long lifetimes. Crydom's SSR's typically comprise an optical coupler, the output of which either drives the line directly or is used to switch a high-power device, such as a silicon-controlled rectifier (SCR) or thyristor. Whatever the drive component, it's the optical-isolation and no-moving-part aspects of the device that grant its many performance features. These features include high I/O isolation (though leakage current is a problem), long life (measured in millions of cycles), low acoustic noise, no contact bounce/arcing, mechanical ruggedness, and low drive-current requirements. They are available in tube packaging for small quantities and prototype work. Tape and reel packaging for automated insertion equipment.

MCTC SSR Temperature

The Crydom MCTC is a unique self-contained state of the art basic temperature controller that combines all the necessary functions into one easy to set up and use standard size package. The MCTC is ideal for temperture control users that do not need multiple built-in options, displays and functions that they will never use. The unit incorporates an internally compensated thermocouple input (J or K), available temperature range of 100~500°F, with adjustable set point using analog voltage of 0-5VDC. With integrated zerocross burst firing, and proportional derivative control to avoid set-point overshoot, the unit also includes 2 LED status indicators for visual reference of operation and set point conditions.

Tight Seal IP68 Nylon Cable Grips (Glands) with Lock Nuts

Application: The use of synthetic cable grips is almost unlimited within the electrical and electronics industry. Installations where cables must be led safely through a wall of an enclosure will be specified with cable grips. Synthetic cable grips are specified to: • Secure the cable to the enclosure's wall to provide excellent pull-out resistance. • Seal and protect the inside of the enclosure from the unwanted affects of the environment. These contaminants may be water, gas, chemical vapors, or fumes. • Reduce material cost due to use of lighter, less expensive materials, as well as, eliminating the need for running conduit.

Technical Data:
- **Material:** Polyamide PA 6, Self-Extinguishing, Halogen-free
- **Seal:** Neoprene, Oil, and Petroleum Resistant
- **Operating Temperature:** Static (-40°C ~ 100°C), Dynamic (-30°C ~ 80°C)
- **Safety Class:** IP68, Waterproof (5 Bar)
- **VDE Test Report:** 12 796-9000-4001/A 2 J

3M Heat Shrinkable Tubing

KYNAR®, EPS-300, SFTW202 GYS, SFTW203, 8420 & 8440 Series

KYNAR® Series-Modified Polyvinylidene Fluoride: Shrink Temperature: 175°C (347°F). **Color:** Clear. **Shrink Ratio:** 2:1. Cross-linked, thin-walled tubing offers a high degree of mechanical strength and high temperature resistance. This has outstanding abrasion resistance and cut-through properties in combination with high dielectric strength. It is inherently flame retardant, semi-rigid and highly resistant to most industrial fuels, chemicals and solvents. Kynar® is a registered trademark of Elf Atochem North America, Inc.
EPS-300 Series-Adhesive-Lined Flexible Polyolefin: Shrink Temperature: 121°C (250°F). **Color:** Black. **Shrink Ratio:** 3:1. Rapidly shrinks to a skintight fit, forcing the melted adhesive to flow and cover the substrate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon cooling, the adhesive solidifies forming a permanent, non-drying, flexible and water resistent barrier.
SFTW202 GYS Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Green and yellow striped. **Shrink Ratio:** 2:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.
SFTW203 Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Black. **Shrink Ratio:** 3:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.
8420 Series-EPDM and 8440 Series-Silicone Rubber Tubes: Color: Black (8420 Series) and Gray (8440 Series). **Cold Shrink™ Insulators-**Open-ended, tubular rubber sleeves that are factory expanded and assembled onto a removable plastic core. Provides a reliable seal without the use of heat, a torch or adhesive - simply position and unwind the core allowing the tube to shrink and form a water-resistant seal.

Butyl Rubber Shrink Tape

DAFLEX ST250 cold shrinking Stretch-N-Seal tape requires no heat to provide a secure covering where the size and/or shape of an object does not permit the use of shrinkable tubing. Simply remove 2" to 3" of tape from the roll, remove the liner, stretch tape to 50% of the supplied width and wrap it spirally around the object, with 50% overlap. In minutes the tape will react with itself to form a mass which will provide protection from moisture, most chemicals, over 1KV per mil. DAFLEX ST250 can be removed easily without leaving any residue since the tape does not use a mastic or adhesive liner. Shelf life is over 5 years. It is helpful for covering, sealing, splicing, holding bundles, joining and repair applications.

Specifications: • Operating Temperature: -40°C ~ 130°C • UL Approved for 100°C

HORN 豪恩

Electret Condenser Microphone and Holders

Electret condenser microphones consist of a high voltage internal electret membrane, a metal electrode and a field effect transistor (FET). They are manufactured in a quality controlled facility in China. All microphones are produced with Japanese made FETs to ensure high quality and reliability. This along with 100% testing ensure a zero defect rate. Horn's commitment to quality has earned them approval from a famous global manufacturer of mobile phones. Horn's ECMs utilize a highly efficient, low impedance design, available in omni directional, unidirectional and noise canceling versions. All microphones are non-washable.

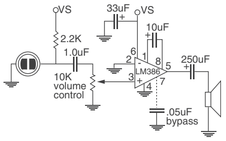
Panasonic®

Electret Condenser Microphone Cartridges



Consists of a high voltage internal electret membrane, metal electrode and a Field Effect Transistor (FET). Doesn't need a high-voltage bias from the outside like ordinary condenser microphones. **Features:** Highly efficient electrical specification, pressure type operating principle, low impedance (2.2kΩ), omnidirectional back directivity and a high degree of reliability under adverse shock, vibration and environmental tests. **Applications:** Telephone and telephone answering devices, tape recorders, intercoms, computer modems, completed microphones for recording, testing and monitoring, hearing aids, sonic controlled toys and sensors and others. All buzzers and microphones are non-washable.

NEW! Clean-Walk Mats

Clean-Walk Unframed Mats (5830 Series) and Clean-Walk Framed Mats (5840 Series) are multi-sheeted adhesive systems that remove dirt and contaminants from shoe soles, wheels and other passing objects on contact. The pads offer 30 or 60 removable adhesive polyethylene sheets that lock dirt in place until discarded. The 5840 Series features a non-skid plastic base that is ideal for carpeted areas. The 5830 Series is ideal for smooth floor surfaces such as concrete.

Applications: • Prevents contamination between high traffic production areas and office environments • Ideal for fabricated metal shops, machinery and electronics equipment operations, printing and publishing facilities, construction and remodeling projects, health care facilities, warehouses, office, commercial and government buildings. • For use in clean room entrances

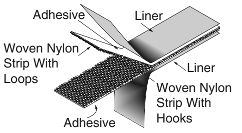
3M Fastening Systems

Scotchmate™ Hook and Loop Fastening Systems



When the two sides of a Scotch-mate Hook and Loop Fastener are pressed together, hundreds of tiny stiff hooks mesh with a surface of pliable loops. Simply press together to fasten and pull apart to open and you can do it thousands of times during the life of your product. Depending on the application, select either plain-backed or adhesive-backed versions. Plain-backed versions are easily sewn or stapled in place. Adhesive-backed fasteners are available for bonding to bare or painted metal, many plastics including plasticized vinyl, plus wood, glass and more.

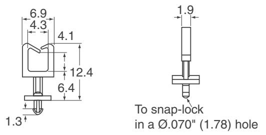
Wire Saddle

Wire Saddles are ideal for routing wires or optical fiber. Wires can be easily inserted into the top side of the saddle to protect them from abrasion. The “micro” is ideal for low profile applications and takes up very little real estate.

The MOFNSA is designed to snap into a .125” diameter hole in a .093” thick panel for applications that require a thicker board than the standard 1/16” board.

Micro



To snap-lock in a Ø.070" (1.78) hole

THERMAL PRINTERS:

Use a non-impact method for printing. This is accomplished by using chemically treated thermal paper. Chemicals suspended in the paper react to heat generated by the print head to form dots that make up the characters or image. Citizen offers a thermal serial printer and a thermal line printer.

The serial printer uses a moving head that prints one character at a time, it is most suited for character printing, although the high speed model does support graphics. Its main benefit is low cost. Line printers have a fixed print head, printing one line at a time. It is suited for both high speed character and graphic printing. Its main benefits are higher definition graphic printing along with fewer moving parts.

INTERFACE BOARDS:

Acts as an interface between user's system and the thermal printer. Monitors temperature and paper status. Controls motor(s) and thermal head energy for optimal printing. Generates built in test pattern. Accepts both simplified Centronics or RS-232C (TTL only) interface.

NOTE: CBMA now markets the former Panasonic line of Thermal Printer Mechanisms. Please call Digi-Key for details.

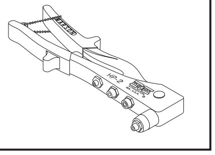
Hand Rivet Tools

HP-2®/39000



The HP-2 is the largest selling hand rivet tool in the industry. Its square shoulder fulcrum pin of cold-formed heat-treated steel prevents pin rotation that can elongate the engaging holes and cause premature tool failure in imitation tools. The HP-2 hand rivet tool sets up to 3/16” steel rivets and comes with four mounted nosepieces (3/32”. 1/8”. 5/32” and 3/16”) and a service wrench.

Prototype Boards

Vector Prototyping Boards with punched holes are convenient economical tools for assembling circuit components and cost effective alternatives to custom designs. Use general purpose Plugboards and Bus specific for edgeboard connection prototyping, while Circboards are ideal for cutting down to smaller board sizes.
• Holes on 0.1" (2.54mm) grid .042" (1.07mm) diameter (.043" [1.09mm] on V1018 and V1029) • Ejector Hole • Plating: Gold/Nickel • Board Material: Epoxy Glass Composite.

PC/XT and AT Expansion Units:
• Marked edge contact identification • Gold plated edge contacts on 0.1" centers • Power and ground buses terminate to connectors • Pads on board and bracket accepts DB9-, 15-, 25- or 37-Pin I/O connector • Accepts Vector's press terminals for wiring & soldering • Holes are .042" (1.07mm) diameter or 0.1" (2.54mm) grid • 1/16" (1.59mm) thick epoxy glass material, gold/nickel contacts • Universal mounting bracket and card guide included • Layout planning sheets and instructions included • Plugs into any IBM AT slot with dual connectors (AT unit only) • Pads for mounting dual, row 0.1" (2.54mm) spaced header (AT unit only)

Circbords™: • .042" (1.07mm) diameter holes on 0.1" (2.54mm) grid • 1/16" (1.59mm) thick, epoxy glass composite boards • Flame retardant • Etched copper patterns are solder plated.

VME/DIN Backplanes

Vector Monolithic Series back planes are designed to meet VMEbus Specification Rev C1 and Rev D. All termination is placed inboard of the two end connectors to allow the maximum number of slots (21) in a 19" RETMA rack. Decoupling capacitors are provided at the ends. The resulting improved power distrubution as well as signal shielding in ground layers creates a high performance back plane with low signal cross talks. Press-fit 96-pin DIN connectors are used. The "P" series which uses a 10-pin power block or "bug" and #6-32 hardware or the "M" series which uses a combination of power bugs and Mate-N-Lok connectors.

Twin Industries

Solderless Breadboards

Breadboards are commonly used for prototyping because they allow you to quickly build temporary circuits without soldering. Twin Industries premium quality solderless breadboards have aluminum ground plates for high speed and low noise, and a color coding Letter/ Number labeling scheme to assist in circuit layout and debugging. In addition, there are binding posts for convenient attachment of power sources, or input and output signals.

SMT Adapter Boards

Surface mount components are soldered to pads on boards. Traces extend from pads to prototyping holes on standard 0.1" x 0.1" (2.54mm x 2.54mm) grid. Individual leads can be monitored or other components can be added to evaluate performance of surface mount product. Saves time and prototyping cost.

All boards made with FR4 laminate, and featuring ground plane on back side. Pad to pad spacing (pitch) is measured in mils (thousandths of inch).

SURFBOARDS® by CAPITAL ADVANCED TECHNOLOGIES INC.™

The Breadboarding Medium for Surface Mount

The Surfboard Concept: The concept behind SURFBOARDS is elegantly simple. Many models incorporate foil patterns that are designed to accommodate a wide variety of component mounting footprints. SURFBOARD® models for SOICs and PLCCs provide standard mounting footprints for the IC and depending on the model chosen, will include a prototyping area for additional components or provide a direct pin-out. Most SURFBOARD® models feature SIP (single in line) pins that make prototyping and interfacing with other circuits easy.

Specifications: • Material: G-10 FR-4 Fiberglass laminate, 1oz. Cu. .032" (.81mm). Thickness ±.005" (±.13mm) • Finish: Level 60/40 Solder alloy • S.I.P. Pins: On applicable models. Soldered on .100" (2.54mm) centers. SURFBOARDS® can be hand soldered and are compatible with most industrial soldering processes. (Suggested soldering and assembly guidelines included).

The universal circuit patterns allow for the mounting of 0603, 0805, 1206 and mini-melf packages as well as a wide variety of 3 terminal devices.

The 33000 Series of Surfboards® are application-specific adapters that convert surface mount component footprints to Single-In-Line (SIP) format. The boards feature pre-installed pins on .100" (2.54mm) centers making them compatible with conventional breadboards, solderless breadboards, and sockets. The SIP format provides ease of signal probing as well as higher densities when prototyping. Models are available to accept a wide range of surface mount semiconductors and integrated circuits.

Models 33113 and 33623 feature two SIP pins for each pad for higher current applications. Model 33213 features large soldering pads as connection points and SIP pins for measuring purposes. Boards are .031" ± .005" (.79mm ±.13mm) thick FR-4 and feature solder-coated 1-oz. Circuit Foils that can be hand-soldered or soldered by most conventional processes.

SIP pins are soldered in place on .100" (2.54mm) centers. All boards feature solder mask to limit flow of solder to pad area and aid assembly. Just add parts and plug in.

ESD Mats and Hardware

NEW! Static Control Anti-Fatigue Mats

3M Anti-Fatigue Mats consist of a matrix of hollow cylinders that function like a spring when compressed. These mats provide a durable cushion that offers secure, stable footing and a unique energizing responsiveness. Their structure provides a stable surface supported by rubber cells that soften in response to surface activity. These cells provide the most effective cushioning solution because the 3M Static Control Anti-Fatigue Mats get softer as compressed, not harder like products made of foam. Features: • Color: Black • Resistance: Surface to Ground Snap: <1 x $10^6\Omega$, Surface to Ground: <2 x $10^6\Omega$ (when connected through 3M Ground Cord 3040) • Temperature Use Range: -40°C ~ 82°C

Dissipative Mats

8200 Series:

Vinyl mats are soft table and floor mats with a unique three-layer construction. The top layer is durable static dissipative vinyl, which has sufficiently low resistance to discharge static-laden conductors, yet will prevent the shorting of pins on the backs of printed circuit boards laid on the mat.

8200 Series Floor Mats includes one 15 foot (4.6m) 3040 Ground Cord and two 3050 Snap Fasteners (installed).

8210 Series Table Mats includes two 3M 3050 Snap Fasteners (installed) and one 3M 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

8800 Series:

Rubber mats consist of a top layer of static dissipative rubber laminated to a bottom layer of conductive rubber. Both layers are made from vulcanized synthetic rubber, which offers excellent resistance to oil, grease and most common solvents. They offer superior resistance to heat and hot solder as compared to vinyl or olefinic materials.

8810 Series Table Mats includes two 3034 Snap Fasteners (installed) and one 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

Wrist Strap Workstation Monitor

The 3M 724 Wrist Strap Workstation Monitor continuously verifies the resistance of the operator and work surface ground connections. The monitor uses a reliable resistance method that actually includes the operator's skin resistance to determine if the system is operating properly. If the operator's resistance exceeds 10 megohms or 35 megohms, or the wiring connections exceed 3.7 megohms, audible and visible alarms are triggered. The unit will also warn of potentially dangerous low-resistance situations.

The monitor uses the light and compact dual conductor wrist strap. Dual conductors provide the resistance circuit that is monitored as well as provide grounding redundancy. If one conductor fails, the other will still function to prevent sensitive components from being exposed to static.

Comes complete with a quick connect/disconnect 732 Remote Jack and mounting hardware.

METCAL
DIVISION OF OK INTERNATIONAL

MX Series Rework Soldering Systems and Replacement Parts

Features: SmartHeat® Technology. Metcal's tip cartridges sense the load and instantly adjust power to quickly deliver the right amount of heat precisely where it is needed. Metcal systems use SmartHeat Technology that is incapable of overshoot and can deliver high throughput at lower temperatures. Because the interchangeable SmartHeat cartridges contain a heater and temperature self-regulating alloy, Smart-Heat systems require no calibration. SmartHeat technology systems need no dials or readouts, tip cartridges specify the temperature by series, providing continuous temperature for fast, easy, and safe soldering.
Metcal's Talon® easy-squeeze design makes removing SMD components a snap. Talon was designed with ergonomics, style, and superior performance in mind. Beveled edge tips allows rework of several different components without changing tip cartridges.

CHIP QUIK®

SMD Removal Kits

CHIP QUIK SMD rework products are designed as a low cost way to rework SMD components including QFP and PLCC packages, with very low temperature (300°F). It virtually eliminates damaged pads and circuitry or lost boards due to heat damage. SMD1 contains everything needed for removing SMD components with either convection (hot air) or conduction (solder iron). Use SMD16, SMD32, and SMD291 for larger jobs which require more CHIP QUIK material and flux. SMD2000/SMD6000 kits are complete Solder/Desolder rework kits for safely removing SMD components, cleaning the pads, placing component and reapplying solder safely with low operating temperatures. Approved by many top industry PC board manufacturers for reworking faulty components, without the need for specialized solder equipment.

CHIP QUIK removal alloy-no lead formula has been tested for rework on PC Boards that were manufactured with lead and no-lead solders with excellent results on both. It has also been successfully tested for SMD removal on all the major no-lead solders that are presently available in the industry.

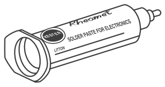
Solder Paste



Kester solder paste was developed for applications of surface mount PCBs and components. All pastes are SN63/PB37 with a mesh size of -325 to +500 (25 to 40 microns) and come in 35gm syringes for hand dispensing. R276 No-Clean formulation provides optimal performance in all types of dispensing applications. Designed for reflow practices that don't require cleaning of the PCB. R500 Water Soluble solder paste is aggressive enough to remove tenacious oxide layers and offers excellent wetting characteristics.

Pastes should be refrigerated to preserve their usable life.

Note: To ensure customer satisfaction and product integrity, pastes must be shipped overnight or 2nd Day Air only. Tips are not included.

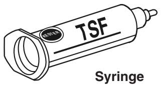
Paste Flux and Liquid Flux Pens

Flux - Pen



Syringe

Kester flux pens use a spring-loaded tip to dispense just the right amount of flux while preventing the flux inside from drying out. Tacky Solder Flux is a No-Clean paste flux that maintains its characteristics for up to 8 hours after dispensing and can be used in a wide range of temperature and humidity conditions. Can reflow in both air and nitrogen environments. SP244 is a mildly activated rosin paste flux designed to be used as a No-Clean formula for rework applications.

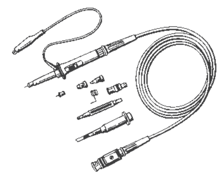
High-Performance Oscilloscope Probes

IEC 1010 Category I or Category II Compliance

It is important that you select a probe with the same bandwidth or "frequency range" as the oscilloscope used for the job. For example, if you're using a 100 MHz oscilloscope, choose a probe with a minimum of 100MHz. To achieve optimum performance, choose a probe with more than twice the bandwidth of the oscilloscope.



Category I This slim design comes equipped with interchangeable cables, probe tips and grooved heads. Compensation adjustment placed in the BNC eliminates noise and interference related pickup. Available in switchable and non-switchable versions.

Category II This versatile design offers three monolithic interchangeable probes in 60, 100, and 250MHz bandwidth.

Panasonic® Nickel-Metal Hydride Batteries and Tabbed Versions

Features: • **Superior Energy Density:** Nickel-metal hydride batteries have approximately double the capacity compared with Panasonic's standard Ni-Cad batteries • **High Cycle Life:** Like Ni-Cad batteries, nickel-metal hydride batteries can be repeatedly charged and discharged up to approximate 500 cycles (under ideal conditions).

Because a specially designed charger will be necessary, please consult the Panasonic Technical Handbook (P001-ND) regarding the charge system • **Flat trickle charge cannot be used** • **Excellent Discharge Characteristics:** Since the internal resistance of nickel-metal hydride batteries is low, continuous high-rate discharge up to 3C (10C for 4/5SC, SC) is possible in the same way as for Ni-Cad batteries. • **Excellent Reliability:** Self-discharge performance is the same or better than that of nickel-cadmium batteries. In addition, charging batteries after extended storage restores original battery capacity. Battery safety has also been improved and verified through testing under a wide range of conditions of use.

Applications: • Communication • Office Automation • Audio Visual Equipment • Other High-Tech Products.

Caution for Safety: Improper usage may cause battery liquid leakage, heat generation or explosion, resulting in equipment failure or injury • Do not disassemble or rework the battery • Do not solder the battery directly • Do not use new batteries together with old batteries, or different type batteries mixed together • Follow the specified charge conditions.

"H" Type: Improved low rate charge characteristics at higher temperatures. Ideal for back-up applications (with appropriate charge control circuitry).

Notes: • **Battery Packs made with NIMH Cells include a thermostat from Texas Instrument.**
- **Nickel-metal hydride batteries are not a drop-in replacement for Ni-Cad batteries.**
- **Recycling information available on Digi-Key website.**
- **See following page for Battery Pack information.**

It is the responsibility of each user to ensure that each battery application system is adequately designed safe and compatible with all conditions encountered during use, and in conformance with existing standards and requirements.

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

Panasonic® Nickel Cadmium Batteries

The Panasonic nickel-cadmium battery is a rechargeable sealed nickel-cadmium alkaline cell.

Features: • Long life • Excellent discharge characteristics • Long shelf life • High-rate charging • Wide temperature range • Reliable, self-resealing vent • Sealed, strong, leakproof construction

Applications: ***For Cyclic Use:*** • Consumer applications • Office equipment • Tools • Photography • Toys and Hobby ***For Trickle or Float Charge Use:*** • Emergency devices • Memory back-up

Special Purpose Batteries: Super High Capacity and Rapid Charge "S" Type: Super high capacity and rapid charge "S" type batteries are ideal for today's high capacity needs. They feature increased capacity and rapid charging within approximate 1 hour. The high-density positive base material of foam nickel is combined with the pasted negative plate to produce a capacity approximately 40% greater than that of the rapid-charge "R" type battery of the same size. **Rapid Charge "R" Type:** The "R" type cell has a specially improved negative plate with increased gas absorption characteristics. It can be subjected to controlled charging at the 1C rate and rapid-charge in 1 to 1.5 hours is possible.

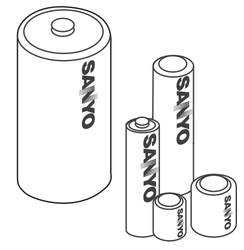
SANYO Ni-Cd Batteries



Nickel-Cadmium (Ni-Cd) batteries use nickel oxide in its positive electrode (cathode), a cadmium-compound in its negative electrode (anode), and potassium hydroxide solution in its electrolyte. The Nickel-Cadmium battery is rechargeable, so you can use it over and over.

Features:

- Discharge voltage remains stable even in conditions of high-rate discharge current – for equipment needing a high-rate discharge current, it's far more stable than other battery types
- Wide operating temperature range of -20°C ~ 60°C — operates especially well in low temperatures
- Performance doesn't deteriorate even after long-term storage – full recovery of original performance levels after recharging
- Designed to withstand overcharge and overdischarge – superior durability
- Sealed configuration with gas release vent – easy maintenance and no leakage
- Produced using an ISO9000 certified quality control system – high quality and reliability

Applications:

- Cellular phones, telecommunications equipment
- Portable audio-visual equipment
- Emergency lights
- Electric tools
- Battery-powered vehicles

Panasonic® Manganese Lithium Rechargeable Batteries (ML Series)

Features:

- **Charging at voltage levels even under 3V**. In order to support the current trend in ICs toward lower voltages, these batteries can be charged at a 3 ±0.2 voltage level, and this makes it easier to set the charging circuits for the circuits which employ 3V ICs.
- **Large capacity for hour-after-hour back-up.**
- **Excellent withstand voltage characteristics.** These batteries can withstand the application of a continuous 3.2V voltage at a high temperature of 60°C (140°F).

Applications:

- Power source for backing up memory data in mobile telephones, personal handyphone systems, memory cards, pagers, data terminals and office automation equipment.

Panasonic Lithium Batteries

The main features of lithium batteries are as follows:

- **High Voltage:** Nominal voltage is 3V, which is nearly double that of other batteries which use the aqueous electrolyte system, such as manganese dry batteries, and silver-oxide batteries.
- **High Energy Density:** Overwhelmingly high energy density, as compared with conventional batteries and other lithium batteries. The energy density is 5 to 10 times higher than that of manganese dry batteries.
- **Long Service and Shelf Life:** Since Panasonic lithium batteries are composed of chemically and thermally stable material, self-discharge is extremely small. Deterioration when stored at room temperatures is ca. 0.5% annually – worry about deterioration is unnecessary.
- **Stable Flat Discharge Voltage:** Since conductive carbon is continuously formed during discharge, internal impedance does not increase until the end of discharge, thus stabilizing discharge voltage.
- **Excellent Temperature Characteristics:** Organic solvent ensures a low electrolyte freezing point so that the batteries can be used in a wide temperature range, -40°C ~ 85°C is standard (-40°C ~ 125°C for the High Temperature Coin Type; -40°C ~ 70°C for Camera Type; -30° ~ 60°C for CR2004/P9A).
- **BR Types versus CR Types:** BR, or (CF) n/Li, batteries provide a more stable voltage particularly during the last half of discharge, while CR, or Mn02/Li, batteries provide a higher voltage during the first half. CR batteries also can provide a higher current capability than BR batteries. In storage, BR batteries perform better at high temperatures. These characteristics must be taken into consideration when selecting a battery for a particular application.
- **UL Approval:** Panasonic Lithium batteries are UL recognized. UL File No. MH12210.
- **DOT Exemption:** Panasonic lithium cells and multiple cell batteries are authorized for transportation, in commerce, by U.S. shipping exemption DOT-E7052.
- **Disposal Information:** Panasonic lithium cells are not an EPA listed hazardous waste, but may be considered a "characteristic" hazardous waste. Lithium metal, the anode component of the cells, is considered by the U.S. EPA to be hazardous when disposed because it is reactive with water. However, a cell which contains a small quantity of lithium metal is not necessarily a hazardous waste. Disposal regulations and policies are different in each State and are subject to frequent changes. Contact your local jurisdiction for specific advice on disposal.

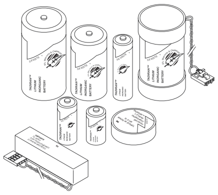
TADIRAN Lithium Batteries Lithium Batteries



Lithium Thionyl Chloride (Li/SOCl$_2$) Cell: Non-Rechargeable
Tadiran Lithium Thionyl Chloride cells offer enduring quality. They are a superior power source, combining the highest energy density and voltage, longest service life, lowest self-discharge, plus the widest temperature range of any battery commercially available. These cells are ideally suited to provide long lasting power solutions for critical applications, including high tech electronics, military, consumer appliances, even state-of-the-art wireless communications. Tadiran batteries last by far longer than conventional cells, making them ideal for remote, portable, or seldom used equipment. Non-rechargeable.

TL-51XX MBU Series:

- Very low self discharge rate • Suited for long-term operation at low current levels with long stands • Intermittent discharge with medium current level, provided that the average current exceeds the active current level

TL-2XXX XTRA™ Series:

- Excellent shelf life (10 years) • Very low self-discharge • Major improvement of voltage delay at the start of discharge at medium current levels (TMV) • Intermittent discharge at medium current levels

TL-59XX XTRA™ High Capacity Series:

- High capacity batteries for long term applications at low currents • For use in wireless sensors, utility meters, RFID tags, toll tags for toll road pricing, etc.

TLM-15XXMP and TLM-15XXHP Series:

- These two families, High Power and Medium Power, are specifically designed for applications requiring high power, long life and extended storage.

TLH-XXXX Extended Temperature Series:

- For Operation at Temperatures up to 125°C

Applications: The following list represents actual applications where Tadiran Lithium cells and batteries are already being used as a main or backup source of energy: • Utility meters and A.M.R. equipment • PC computers and data loggers • CMOS memory and RTC backup • Toll tags and RFID transponders • Programmable logic controllers • Wireless alarm sensors • Sea buoys and remote monitoring systems • Military and Aerospace systems • Automatic External Defibrillators • Communications Systems • Telematics

UL Approval: Tadiran Lithium Thionyl Chloride cells and batteries are UL recognized. UL File No. MH12193.

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

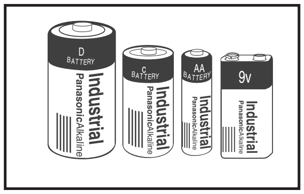
Panasonic Industrial Alkaline and OxyRide™ Batteries

MADE IN U.S.A.



Alkaline: The cylindrical alkaline battery is composed of: manganese dioxide for the positive-activating substance, zinc powder for the negative-activating substance, and caustic alkali for the electrolyte.

Features: • Large Current and Large Capacity for an Excellent Performance • Stable Voltage and Current • Unsurpassed Resistance to Leakage • Excellent Storage Life

Applications: 99% *MERCURY FREE:* • Headphone stereo, radio-cassette recorders, strobes, cameras, electronic calculators, 8 mm cameras, electric shavers, tape recorders, high-power flashlights, toys and other cordless products. Also available in tabbed versions denoted by "T" suffix in Digi-Key part number.

OxyRide: is the result of a two-way breakthrough in materials and manufacturing technology exclusive to Panasonic. The OxyRide battery uses newly developed oxyhydroxide which releases a higher initial voltage than traditional alkaline batteries, while a new vacuum-pouring technology allows a higher quantity of electrolytes to be inserted into the battery. As a result of these innovations, the Oxyride battery offers more power and longer-lasting energy.

Applications: • Digital Cameras • High Current Drain Devices • Applications of >500mW or >500mA • Also available in tabbed versions denoted by "T" suffix in Digi-Key part number.

OxyRide batteries are NOT recommended for use in flashlights (except LED flashlights) or any product with bulbs

Digi-Key is not approved by any state or federal agency as an authorized supplier of product for medical, life support or life sustaining devices or systems.

Panasonic Sealed Lead-Acid Batteries (Valve Regulated)

GENERAL FEATURES: "DO NOT LEAK!!"

• **High Quality & High Reliability:** The LCR battery has stable and reliable capacity. 100% tested on line for voltage, capacity, and seals. And all vents are 100% visually inspected during the final assembly process. • **High Power Density:** These batteries save installation space, while providing full and reliable power for the equipment, and many have been designed for rapid recharge, or for high power output. • **Leak-resistant Structure:** The LCR battery uses an absorbed electrolyte system. The LCR batteries have exceptional leak resistance, **and can be used in any position.** • **Long Service Life; Float or Cyclic:** The LCR battery has long life in float or cyclic service. • **Easy Maintenance:** There is no need to check the specific gravity of the electrolyte or to add water during the service life. Totally sealed, and needs only charging for maintenance. • **No Corrosive Gas Generation:** There is no corrosive gas generation during normal use. • **Exceptional Deep Discharge Recovery:** LCR batteries have exceptional deep discharge recovery and charge acceptance, even after deep or prolonged discharge. • **D.O.T and I.A.T.A. Approval:** Transportation; The SLA batteries should be handled as common cargoes for both air and boat shipping. • **U.L. Component Recognition:** U.L. Component Recognition under UL1989, requires that the battery safely vent when overcharged. It further requires that the equipment and battery be submitted together for formal UL approval. **(UL Component Recognition does NOT remove this requirement for complete package testing).** The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

ACL Staticide® PowerPen

ACL Staticide's PowerPen is a battery contact cleaner that inhibits and removes oxidation on all types of batteries and terminals of battery powered products. PowerPen will maximize your battery's performance, and will protect all terminals from corrosion, extending the product life. **ST1026-ND**............ **$6.13**

Sealed Lead-Acid Batteries (Valve Regulated)

TECHNICAL FEATURES: “DO NOT LEAK!!”

- **Sealed Construction:** BB unique construction and sealing technique ensures that no electrolyte leakage should occur from the terminals or case. They are classified as “Non-Spillable” and meet all requirements of the International Air Transport Association (I.A.T.A.) and D.O.T.
- **Electrolyte Suspension System:** All BB batteries utilize an electrolyte suspension system consisting of a glass fibre separator material. This suspension system helps to achieve maximum service life, by fully retaining the electrolyte and preventing its escape from the separator material. No silica gels or other contaminants are used.
- **Maintenance Free Operation:** During the life of BB batteries, there is no need to check their specific gravity or add water etc. In fact, there are no provisions for such maintenance functions to be carried out.
- **Operation In Any Orientation:** The combination of sealed construction and BB’s electrolyte suspension system permits operation of BB batteries in any orientation, but upside-down charging should be avoided. Battery will not lose its capacity, electrolyte, or service life under any orientation.
- **Low Pressure Venting System:** BB batteries are equipped with a safe, low pressure venting system, which is designed to release excess gas and reseal automatically in the event of the internal gas pressure rising to an unacceptable level. This low pressure venting system, coupled with the significantly high recombination efficiency, make BB batteries one of the safest valve regulated lead acid batteries available.
- **Heavy Duty Grids:** The heavy duty lead calcium alloy grids in BB batteries provide an extra margin of performance and service life in both float and cyclic applications, even in conditions of deep discharge.

The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

- **U.L. Component Recognition:** U.L. Component Recognition under UL1989, requires that the battery safely vent when overcharged. It further requires that the equipment and battery be submitted together for formal UL approval.

AC Axial Fans

NMB-MAT AC Axial Fans suit a wide range of applications. They force air out in a “funnel” type pattern, and are ideal when cooling a specific area such as a power supply that is surrounded by numerous components with minimum ventilation available.

DC Blowers

NMB-MAT DC Blowers are most suitable for cooling in high back pressure applications. Since the fan impeller is housed inside a rugged plastic enclosure, the blower is not affected by high back pressure caused by objects in close proximity to the exhaust port.

Specifications: • Operating Temperature: -10°C ~ 60°C • Storage Temperature: -40°C ~ 75°C • Blowers with Hydro-Wave and Ball Bearing Technology

SUNON

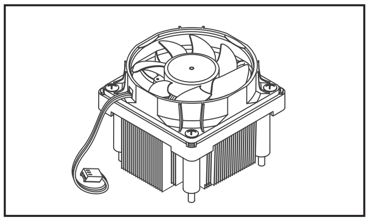
NEW! WATURBO CPU Cooler

RoHS COMPLIANT



The world's newest innovation in liquid cooling - the Sunon Waturbo system uses the fan motor to drive the liquid pump. The Sunon Waturbo uses the magnetic coupling to transmit the driving torque of the impeller to the liquid pump in the heat sink. This means that no pump motor or other electronic parts are required to cool the water.

ThermaPro-V (TPV) DC Fans

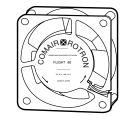

Fig. 2

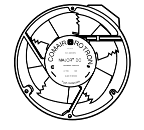

Thermal Speed Control: This option uses a thermistor to monitor the temperature and regulate the speed accordingly. The fan will automatically adjust its speed to optimize the airflow to the surrounding temperature. For conditions where power inputs are at a minimum, the fan operates at half speed, providing a minimal amount of CFM to those components still in need of cooling. This reduction in speed results in a significant reduction in noise and power consumption. As the power requirements increase, so does the internal temperature. The fan senses this increase and compensates for it. The fan will continue to increase in speed until it reaches full speed for maximum cooling. The temperature range is 25°C ~ 45°C. Any temperature below 25°C the fan will operate at half speed. Between 25°C and 45°C, the fan RPM changes linearly with temperature. Over 45°C, the fan will maintain full speed operation.

Fans equipped with this option use a thermistor. The thermistor can be located on a zip cord and placed on hot spots such as processors, heatsinks, transformers, etc., or can be placed in the hub of the fan to monitor the air traveling through the fan.

Encapsulated Power Transformers

Encapsulated transformers have added advantages over non-encapsulated transformers. Reduced winding temperature differential due to heat transfer capability of the epoxy. Have a greater VA to Volume ratio which results in cooler and/or smaller transformers. Increased insulation reliability due to use of epoxy in place of tape/paper insulation. Encapsulation also increases shock/vibration and humidity/moisture resistance of the part.

Electrical Parameters: • Temperature: 70°C • Short Circuit Proof (unless otherwise noted) • Hi-Pot tested: 4KV primary to secondary • Frequency: 50/60Hz

- Vertical mounting uses the smallest footprint and surface mount and horizontal through-hole are available in most product series

TurboTrans™ Additional Features:
- Optimizes the transient response of the regulator, while simultaneously reducing the quantity of external output capacitors required to meet a target voltage deviation specification
- Can be used for target output capacitor bank, to significantly improve the regulator's transient response by reducing the peak voltage deviation

Typhoon™ SMT12F Series

RoHS COMPLIANT

The SMT12F series is a new range of ultra-compact non-isolated point-of-load converters for space-critical applications. A key advantage of the SMT12F is that it only needs the addition of five 22μF ceramic output capacitors to provide a complete full-specification, high efficiency POL solution with transient response capabilities that extend up to 300A/μs. The total board space required for the module and capacitors is a mere 300mm^2, facilitating easy co-location with the load.

SIL15C and SIL20C Series

RoHS COMPLIANT

The SIL15C and SIL20C Series are a new high density open frame non-isolated converters for space-sensitive applications. Each model has a wide input range (4.5V ~ 5.5V or 10.2V ~ 13.8V) and offer a wide 0.9V ~ 3.3V/5V output voltage range with a 15A/20A load. An external resistor adjusts the output voltage from its pre-set value of 0.9V to any value up to the maximum allowed value for that model.

NEW! External Power Supplies

SL Power has an external line of power products marketed under the Ault brand. External power is increasingly popular because OEMs require smaller, more feature-rich products that can be used in a variety of environments. The Ault brand has switch-mode power supplies in wall mount and desktop styles for ITE or medical applications. Energy Star models are ideal when efficiency is a must. Power over Ethernet products carry power and data in a single unit that can support legacy or next generation systems that meet the IEEE802.3af standard. **NOTE:** Power cords are not included.

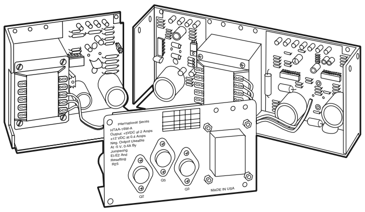
Medical Global Switchers



Features: • Wide range input (85-264V) • Approval to IEC601-1, UL2601 and CSA 601.1 (GNT30 Series approved to EN60601-1) • Conducted Emissions to FCC and VDC Class B • 2-Year Warranty • Models from 28-225W **Input Protection:** Internal AC fuse provided on all units. This fuse only blows if a catastrophic failure occurs in the unit — it does not blow on overload or short circuit. AC input protected against line transients by metal oxide varistors on all medical units. **Output Noise and Ripple:** 0.5% RMS, 1% Pk-Pk maximum on all outputs (20MHz bandwidth on GSM11 and GSM28 series. **Temperature Coefficient:** 0.03%/°C typical for all outputs. **General Specifications:** • **AC Input:** 85-264VAC, 47-63Hz single phase • **Safety Specifications:** All medical models are approved to UL544/ UL2601, IEC601-1, CSA234L3, VDE0750 and CE9LVD • **Overload Protection:** Fully protected against short circuit and output overload. Short circuit protection is cycling type on Outputs #1 and #2; fold back type on Outputs #3 and #4. Recovery after fault is automatic. • **Temperature Rating:** 0°C ~ 50°C full rated load • **Minimum Load:** Single output units require no minimum load except for GSM28 (GSM28 = ±5%). Multiple output units: GPM40 = 0.4A, GPM55 = 0.7A, GPM80 = 1A. • **EMI Compliance:** All models include EMI filtering to meet or exceed conducted emissions of CISPR 11 Class B, VDE0871 Class B (FCC Class B, CISPR 11 Class B and EN5522 Class B for GSM28 Series) • **Voltage Adjustment:** Outputs adjustable ±5% minimum via built-in potentiometer (Factory set for GSM11 and GSM28 Series) • **Remote Sense:** Provided as a standard feature on the +5V output of the GPM130 and on all single output units, GLD150, GLM65, GPFM250 single and primary output GPM130 • **Reverse Voltage Protection:** All outputs protected against inadvertent application of reverse voltage up to 1 times the rated current of the reversed output • GNT30 series is a small footprint
